

Colocation Services

Spectra Access introduces our cost effective colocation services in the Manchester, New Hampshire area. Utilizing colocation services provides your businesses critical servers with direct connectivity to our secure, redundant, high performance network that is interconnected to the Internet via multiple gigabit routers for ultra high-speed, reliability, and redundancy.

Disaster Prevention: Allows your business to place critical servers separate from your physical business location ensuring continual operation of services.

Better Bandwidth Utilization: High volume data services get more bandwidth for less money while increasing the efficiency of your business's Internet connection.

Connectivity Redundancy: All links in the colocation area are backed by diverse paths ensuring the highest connection up time.

Controlled Environment: Regulated climate control maintains temperature and humidity providing an optimal environment for your server hardware.

Failsafe Power: Backed and protected by 75KVA facility-wide UPS (Uninterrupted Power Supply) system which feeds all electrical outlets inside our colocation room. In the event of a electrical utility outage our generator will start automatically within 25 seconds upon detection of a power failure.
